

Digest Plus

Drainage

Nutritional objective of Digest Plus :

Support of hepatic function in case of chronic shortage.

Digest Plus is suitable in case of hepato-digestive affections: colic, constipation, inappetence, hepatic insufficiency, hepatic overload...

- Sorbitol has an activity on biliary and pancreatic deficiency. It is a hepatoprotective recognized for favouring digestive hormones secretion.
- Betaine has hepatoprotective action and regulates lipidic metabolisms.
- Choline and methionine act on fat storage in liver, this combination is efficient for hepatic treatment.
- Methionine has glucogenic and antioxidant activities; methionine contributes to detoxify the liver and it is crucial for nutrition.
- Magnesium is a energy cholagogue often used for digestive therapy.
- Yucca contributes to stable environment enhancement

Composition

Sorbitol, magnesium chloride, yucca
Schidigera extract

Analytical components

Moisture	44,3 %
Crude ash	5,3 %
Crude protein	2,4 %
